

## Phase 2 Project

# Airline Booking System

Sachin Davis Mundassery

WriteUp:

### **UserLogin**

Users need to type in their registered email id and password. On successful authentication , they will be taken to flight search page . here user types the date of travel, source, destination and number of tickets required. Upon search a list of available flights are displayed where user can select the flight they want to book. Now the user provides the some personal details and proceed to the review page. Here the details of the user and the flight he/she selected will be displayed. After reviewing the user will be taken to the payment page. Upon payment the tickets are booked successfully.

### **AdminLogin**

Admin need to type in their registered email id and password. On successful authentication, he/she can reset the password and it will be reflected in the database.
